EDUCATION

Bachelor of Science in Computer Science and Software Engineering

Sept. 2024 – Expected June 2028

University of Washington (GPA: 3.88/4.0, Dean's List)

Bothell, WA

- **Relevant Coursework:** Computer Programming I & II (**Java**), Data Structures & Algorithms (**C++**), Databases, Network Design and Programming, Parallel and Distributed Computing, Software Engineering (Agile Methodologies)

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, SQL, Swift

Frameworks & Libraries: React, FastAPI, Flask, Spring Boot, PyTorch, NumPy, Pandas, SwiftUI

AI & ML: QLoRA, RAG, Vector Search, Amazon Bedrock, Azure OpenAI, Azure AI Search, Azure AI Foundry, wav2vec2, Whisper

Databases & Cloud: PostgreSQL, Azure SQL, Redis, Docker, Terraform, Azure App Service, Blob Storage, Entra ID, Azure DevOps, GCP, S3

Tools: Git, REST APIs, GitHub Actions, Prometheus, Grafana, Cloudinary, Claude Code, Codex

EXPERIENCE

Software Engineer Intern

Jul. 2026 – Aug. 2026

Quadrant Technologies, LLC

Redmond, WA

- Built the AI layer of an internal HR portal spanning policy chat, document management and escalation, using **RAG** with **Azure OpenAI** and **Azure AI Search** over 31 policy documents to return cited answers, with retrieval filtered by **Entra ID** role.
- Cut grounded answer latency from 124s to 7s by tuning model reasoning effort and pooling **Azure** clients, then raised citation accuracy by scoring each retrieved excerpt against the finished answer rather than trusting retrieval rank.
- Wrote the full **Terraform** estate and two CI/CD pipelines on **Azure DevOps** and **GitHub Actions** shipping to **Azure App Service** and **Static Web Apps**, plus 128 automated tests and a 70-question retrieval benchmark, then cut monthly cloud run rate **80%** by right-sizing the app plan and removing an over-provisioned search tier, working in an **Agile** team of 6.

Machine Learning Researcher

April 2026 – Present

DAIS Research Group, University of Washington

Bothell, WA

- Prototyping a **Speech Emotion Recognition** extension for **CareBot**, an LLM-powered mental health chatbot in the NSF-supported **iCare** platform, using Meta's **wav2vec2** (fine-tuned on IEMOCAP) and OpenAI's **Whisper** to capture real-time emotion signals from voice.
- Researching the existing **DistilBERT** personality scoring and **Llama2** response pipeline, then designing parallel audio inference so emotion signals augment the system prompt without changing the core architecture.

Software Developer | Contract

March 2026 – July 2026

Catalog

Bothell, WA

- Built a full-stack social platform for cat owners using **React**, **Python FastAPI** and **PostgreSQL**, supporting pet profiles, paginated feeds, multi-image posts with **Cloudinary** and social features like likes, comments and follows.
- Secured all routes with **Google OAuth 2.0** and JWT validation while implementing pet ownership transfers with notifications and a health calendar with vet records, backed by **SQLAlchemy** ORM and **Docker Compose**.

User Insight R&D Intern

October 2025 – March 2026

Apexiel, Inc.

Bothell, WA

- Fine-tuned **Phi-3** model as an interactive story interviewer via **QLoRA** and **Unsloth** for low-latency inference.
- Accelerated story creation by **40%** across 5 motorsport categories by building a photo-first platform (**Flask**, **React** and **PostgreSQL**) that auto-matches photos to layout templates, cutting photo selection time by **25%**.
- Reduced content complexity by **60%** with a **JSONB content system** for text, images and carousels while boosting upload reliability with a **presigned URL** pattern for direct browser-to-storage media uploads.

Software Engineer Intern

June 2025 – August 2025

Genmark AI

Seattle, WA

- Expanded platform feature coverage by **50%** (6 to 9 supported workflows) by redesigning the UI in **TypeScript** and configuring **Python** backend services for **GCP**, cutting manual marketing work by **40%** with **n8n** automation pipelines.

PROJECTS

AI Safety Red-Teaming Tool - Github Link | C++, Python, Azure AI Foundry, FastAPI, React

- Built a high-performance **C++ policy engine** that detects and scores LLM security vulnerabilities across 10 risk categories, achieving **12x faster** throughput than Python at **8.3 microsecond** median latency.
- Used **Azure AI Foundry** (Phi-4) to generate adversarial prompts and **Azure Content Safety** to score them, then deployed a live severity dashboard on **Azure Container Apps** with automated **GitHub Actions** CI/CD.

LEADERSHIP

President

2025 – Present

Helping Handz, University of Washington

Bothell, WA

- Lead a student volunteer organization that ran a donation drive for **Seattle Children's Hospital**, delivered hygiene kits to unhoused residents across Seattle, helped build tiny homes for transitional housing and restored native habitat with **Whale Scout**.
