Seattle, WA

EDUCATION

University of Washington (GPA: 3.88/4.0; Dean's List)

Bothell, WA

Bachelor of Science in Computer Science and Software Engineering

Sept. 2024 – Expected June 2028

- Relevant Coursework: Computer Programming I & II (**Java**), Data Structures & Algorithms (**C++**), Statistics, Calculus I & II, Software Engineering (Agile Methodologies), Introduction to Databases

AWS AI Engineer Nanodegree

Sept. 2025 – Nov. 2025

Udacity (Built in collaboration with AWS)

- Projects: Smart Budget Buddy, Intelligent Document Querying System, a question-answering tool retrieving answers from enterprise documents using **Amazon Bedrock**, **RAG**, **S3** and **Aurora**.

EXPERIENCE

Machine Learning Researcher

Bothell, WA

DAIS Research Group, University of Washington

April 2026 – Present

- Researching the ML microservice and backend architecture of **CareBot**, an LLM-powered mental health chatbot in the NSF-supported **iCare** platform, providing testing and feedback to support Explainable AI (XAI) feature development using **RASA**, **Python** and **LLMs**.

User Insight R&D Intern

Bothell, WA

Aperiel, Inc.

October 2025 – March 2026

- Fine-tuned **Phi-3** model as an interactive story interviewer via **QLoRA** and **Unsloth** for low-latency inference.
- Accelerated story creation by **40%** across 5 motorsport categories by building a photo-first platform (**Flask**, **React** and **PostgreSQL**) that auto-matches photos to templates, cutting selection time by 25%.
- Reduced content complexity by **60%** with a **JSONB** content system for text, images and carousels; boosted upload reliability via **presigned URL** pattern.

Software Engineer Intern

Seattle, WA

Genmark AI

June 2025 – August 2025

- Expanded platform feature coverage by **50%** (6 to 9 supported workflows) by redesigning the UI in **TypeScript** and configuring **Python** backend services for **GCP** deployment.
- Cut manual marketing work by **40%** by engineering end-to-end automation pipelines with **n8n** and **Python** to generate AI-driven content and schedule posts from user instructions.

PROJECTS

AI Safety Red-Teaming Tool - [Github Link](#) | **C++**, **Python**, **Azure AI Foundry**, **FastAPI**, **React**

- Developed a high-performance **C++** **policy engine** detecting and scoring LLM security vulnerabilities across 10 risk categories, achieving **12×** faster throughput than Python at **8.3μs** median latency.
- Leveraged **Azure AI Foundry** (Phi-4) to generate adversarial attacks scored by **Azure Content Safety**; shipped severity dashboard on **Azure Container Apps** with **GitHub Actions** CI/CD catching regressions on every PR.

ML License Compliance Agent - [GitLab Link](#) | **Python**, **GitLab CI/CD**, **Hugging Face**, **CycloneDX**

- Automated ML license auditing across Python packages, AI models and datasets in a single CI/CD pass; published an **Anthropic Claude**-powered agent to the GitLab catalog to explain violations and recommend fixes.

Deep Learning Recommendation Engine - [Github Link](#) | **PyTorch**, **FastAPI**, **Docker**, **Redis**

- Built a production recommendation system on **23,000+** **e-commerce reviews** using **PyTorch** (Matrix Factorization and Neural CF), achieving **37% hit rate** and **25% recall**; deployed with **FastAPI**, **Redis** caching and **Prometheus/Grafana** monitoring.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, HTML/CSS, SQL, Swift

Frameworks & Libraries: React, Flask, FastAPI, Spring Boot, PyTorch, NumPy, Pandas, SwiftUI

AI & ML: Azure AI Foundry, Amazon Bedrock, SageMaker, RAG, Embeddings, Comprehend, QLoRA, Hugging Face

Databases & Cloud: PostgreSQL, Amazon S3, Aurora, Lambda, GCP, Terraform

Tools & DevOps: Docker, Git, GitLab, REST APIs, Testcontainers, JUnit, Redis, Claude Code, Codex
